LinkedIn | GitHub | Portfolio

Professional Summary

QA Engineer (Intern) candidate and fresh CSE graduate (CGPA 3.57/4.00) with formal STQA training and seven testing projects on GitHub. Built Playwright automation frameworks (Page Object Model), automated REST API workflows with Postman and Newman, ran six types of performance tests with k6, and executed manual test cycles producing test cases, execution reports and defect reports. Skilled in Jira bug reporting, SQL database validation, cross-browser testing and Agile/Scrum.

Technical Skills

Test Automation: Playwright (JavaScript, TypeScript, Page Object Model), Selenium (JavaScript), Allure Reporting, Playwright HTML Reports, Regression Automation, Cross-Browser Testing (Chromium, Firefox, WebKit), Dynamic Test Data Generation

API Testing: REST API Testing, API Automation, Postman, Newman, JavaScript Assertions, Request Chaining, HTTP Methods and Status Codes, JSON, Headers, Query Parameters, JWT/Authentication Tokens, Error Handling

Performance Testing: k6, Apache JMeter, Load, Stress, Spike, Endurance and Volume Testing, Thresholds, Custom Metrics, p(95) Response Time Analysis

Manual Testing: Functional, Non-Functional, Regression, Smoke, Integration, System, Usability, Responsive, Edge-Case, Boundary Value and Unit Testing; Positive and Negative Test Cases; Retesting; Test Coverage; Requirement Analysis; Test Plan, Test Scenarios, Test Cases, Test Data, Test Execution Reports; SDLC, STLC, Agile/Scrum; AI-Assisted Testing

Bug Tracking & Tools: Jira, Bug Reporting, Bug Lifecycle, Severity and Priority, Chrome Developer Tools, Git, GitHub, VS Code

Database: SQL, MySQL, Database Validation

Programming Languages: JavaScript, TypeScript, Java, Python, C, C++

Web Technologies: HTML, CSS, PHP, Laravel, Node.js, Express.js, Tailwind CSS, Client-Server Architecture

Documentation, Systems & Soft Skills: MS Excel, Google Sheets, Google Docs, Linux, Windows; Analytical Thinking, Problem Solving, Attention to Detail, Communication, Teamwork, Time Management, Adaptability, Willingness to Learn

Education

United International University (UIU) — **Graduated: July 2026**

BSc in Computer Science and Engineering (Major: Data Science) — CGPA: **3.57/4.00**

Experience

STQA Trainee — **May 2026 - September 2026**

Center for Development of IT Professionals (CDIP), United International University

- Built Playwright UI automation scripts and Postman REST API test collections validating JSON request and response structures, headers, query parameters, authentication tokens, status codes and error handling; used Chrome Developer Tools (Network tab) to inspect API calls.
- Ran load and performance tests with k6 and Apache JMeter and cross-browser tests on Chromium, Firefox and WebKit; documented test scenarios, test cases and results following SDLC, STLC and Agile/Scrum.
- Performed manual functional, integration, system, smoke and regression testing, including validation of workflows, forms and user interactions.
- Reported bugs with reproduction steps, expected vs. actual results, severity, priority and screenshots, and retested fixes; learned Jira for defect tracking.
- Performed basic database validation using MySQL; maintained test cases and results in MS Excel and Google Sheets; used AI tools to assist with test case design, API assertions and Playwright scripting.

Projects

OrangeHRM E2E Automation - Playwright, POM — GitHub Repository

- Built a Playwright Page Object Model framework (Login, Dashboard, PIM and Add Employee page classes) for the OrangeHRM live demo. Automated a 10-step employee lifecycle across Admin and Employee roles: Admin login, PIM navigation, Add Employee form with login credentials, Admin logout, login as the new employee, verification of the displayed name, and logout. Also automated a separate Login/Logout suite with assertions at each step.
- Wrote a reusable data utility that generates random names, employee IDs, usernames and passwords that satisfy the application's password policy, so every run is unique; ran on Chromium, Firefox and WebKit with HTML reports.

EverShop E-Commerce API Automation - Postman, Newman, JavaScript — GitHub Repository

- Automated an end-to-end shopping API workflow (Search, View Cart, Add to Cart, Verify Cart, Delete Item, Bulk Cart Cleanup) as a Postman collection of 6 chained requests with 13 JavaScript assertions, run through Newman CLI.
- Used pre-request scripts to randomize the search keyword and item quantity, and collection variables to pass the

product SKU, cart quantity and delete URL between requests.
- Validated status codes, JSON fields, keyword matches in results and cart quantity arithmetic by comparing the cart before and after adding an item.
- Added try/catch handling for the empty-cart edge case and a `pm.sendRequest()` loop to clear the whole cart; generated Newman HTMLExtra reports.

CartUp E-Commerce E2E Automation - Playwright, POM GitHub Repository

- Built a Playwright framework for the live CartUp e-commerce site using a Page Object Model with dedicated classes for Login, Home, Search Results, Product and Cart pages.
- Automated the full shopping journey (login, search, product selection, quantity change, add to cart, cart navigation, checkout) with URL, toast notification and navigation assertions, structured with `test.step()`; configured Chromium, Firefox and WebKit projects, failure screenshots, traces and CI retries.

SauceDemo E2E Automation - Playwright, Allure GitHub Repository

- Built a Playwright POM framework with six page classes automating three user journeys: locked-out user login error validation; a standard user purchase of three items from cart to order confirmation and logout; and a sorted-product (Z to A) purchase using the performance-glitch user.
- Verified error messages, product names, cart total, subtotal, tax, grand total and the order success message with assertions; generated Allure and Playwright HTML reports.

k6 API Performance Testing Suite - k6, Node.js, Python GitHub Repository

- Built a REST API (Express.js, 1,000 products, validated order creation) as the system under test and designed performance tests for it with k6: baseline, load, stress, spike, endurance (10 VUs for 10 minutes) and volume (up to 1,000 records per page; 10, 100 and 500 items per order).
- Used k6 stages, thresholds (error rate below 1%, p(95) below 500 ms), named scenarios, custom metrics and a parameterized multi-profile script.
- Results: stress test at up to 50 VUs processed about 1.17 million requests (about 6,870 requests/s) with 0% errors; endurance run stayed stable with p(95) between 1.79 and 2.16 ms over 10 minutes and zero failures; throughput scaled almost linearly from 10 to 50 VUs.
- Wrote Python scripts to parse raw k6 JSON output, compute per-minute p(95) and export a CSV summary.

EverShop Search Feature - Manual & API Testing GitHub Repository

- Prepared 10 prioritized client requirement questions for a dynamic search feature, then derived structured manual test cases (ID, precondition, steps, expected result, priority) covering name, brand, partial keyword and SKU search, case sensitivity, typos, special characters, empty input, sorting, filters, pagination, keyboard access and a 375px mobile viewport.
- Executed positive, negative, boundary value and edge-case tests on the live demo site in Chrome (77.27% pass rate) and reported 4 defects with severity, priority, steps, expected vs. actual results and screenshots (SKU search, autocomplete, spell tolerance, search history).
- Documented a UI and API happy path (add three size/colour variants, verify $255.00 cart total) and built a Postman collection of 9 REST requests (GET, POST, PATCH, DELETE) covering search, add to cart, quantity change, removal and cart verification.

Mock Competitive Programming API - System Testing GitHub Repository

- Performed system-level testing of a Node.js/Express REST API (JWT authentication, users, contests, problems, submissions) containing intentionally seeded faults; built a Postman v2.1 collection of 26 requests.
- Covered happy paths, error handling, authentication and permissions, time-based rules and data consistency; found issues such as inconsistent data types, an unauthenticated update endpoint, wrong status codes and non-deterministic leaderboard results. Produced a formal report with test plan, test cases, defect reports and risk recommendations.

Achievements

- Champion - UIU CSE Project Show (System Design & Analysis), Fall 2024; 2nd Runners-Up - UIU CSE Project Show (Advanced Object-Oriented Programming), Summer 2024
- Received the **50% Merit-Based Scholarship** twice and the **25% Merit-Based Scholarship** four times at UIU.
